

Binance Futures Trading Bot – Functional Report

1. Introduction

This document provides a detailed overview of the **Binance Futures Trading Bot**, including its **features, usage, and performance on the Binance Testnet**. The bot is implemented in Python, supports multiple order types, advanced strategies, and provides comprehensive logging.

2. Setup and Configuration

2.1 Environment Requirements

- Python 3.8 or higher
- Binance Futures Testnet account
- Binance Testnet API Key & Secret

2.2 Installation

```
git clone https://github.com/yourusername/binance-trading-bot.git
cd binance-trading-bot
pip install -r requirements.txt
```

2.3 API Configuration

- Add your Testnet API Key and Secret in `config.py`
 - ☐ Ensure keys are **not committed** to GitHub.
-

3. Running the Bot

3.1 Windows

- Run `run_bot.bat` to start the CLI interface

3.2 Linux/Mac

- Execute: `python cli.py`

```

5. Observations & Notes

- Bot successfully places **market, limit, stop-limit, TWAP, and grid orders**.
- Input validation prevents invalid orders.
- Logs provide detailed traceability for each operation.
- CLI interface is interactive and intuitive.

6. Conclusion

The **Binance Futures Trading Bot** is fully functional on the **Testnet environment**, demonstrating:

- Core trading functionalities
- Advanced trading strategies
- Robust logging and error handling

It is ready for further development, custom strategy implementation, and testing of additional scenarios.
